Genel Energy plc

Tawke update

Genel Energy plc ('Genel') notes that DNO ASA, as operator of the Tawke PSC, has today issued an update on licence activity.

The Tawke partners have resumed appraisal drilling at the Peshkabir discovery on the Tawke licence in the Kurdistan Region of Iraq following extended testing of the Cretaceous and Jurassic reservoirs in the Peshkabir-2 well.

The Peshkabir-3 well was spud on 8 July as part of a fast track field development plan including the acquisition and installation of an early production facility by year-end 2017 to be followed by a pipeline connection to the Tawke export terminal at Fishkhabur.

Three Cretaceous productive horizons (Upper Shiranish, Lower Shiranish and Qamchuqa) tested 3,800 bopd, 4,000 bopd, and 1,100 bopd, respectively, of 28° API gravity crude oil during a two-week cased hole testing program in May. The Cretaceous column in the Peshkabir-2 well is estimated to range between 380-590 meters.

Two productive horizons in the deeper Jurassic formation tested 2,665 bopd and 400 bopd, respectively, of 25° API gravity crude oil, again over a two week cased hole testing program in April. The Jurassic column in the Peshkabir-2 well is estimated to range between 125-160 meters.

The well's Lower Shiranish Cretaceous zone has been placed on production since late May at an average rate of 4,500 bopd, trucked to Fishkhabur some 12 km away and commingled with Tawke production for pipeline export through Turkey.

Tawke licence production from the two fields has averaged 115,000 bopd month-to-date in July.

-ends-
